

USA Specialized Checklist

First Class (37c) & 37c Flag Issues 2002-2005

Stamp Designed by Terrence W. McCaffrey

Specialized Checklist
First Class & 37¢ Flag Issue 2002-2005

Dear Friend Collector,

The USA Specialized Checklist of the First Class & 37¢ Flag Issue 2002-2005 will give you the opportunity to make an in-depth study for your collection and gives you an orderly need-list.

I made this checklist for my own collection. I used the Scott Specialized Catalogue of United States Stamps & Covers, open (internet) sources and own research. The list is absolutely not complete and may have some minor errors or mistakes. I hope you will help me to share your knowledge to improve the checklist.

Happy Collecting,

Hans van Gils

Member of the Dutch philatelic society USCA

			Luminescent red ink	☐	☐	☐	☐
			Perf 10 Large holes Non reactive red ink	☐	☐	☐	☐
			Luminescent red ink	☐	☐	☐	☐

Note:

The red colour

Different colours Red seen under normal daylight: **Red** and **Maroon Red**

The red ink

Two types of red ink are used:

Non Reactive Red Ink (NRRI)

The Red ink stays red under longwave ultraviolet light. (also called: **Dead Red**)

The dead Red appears in two reds: dark red and light red.

Luminescent Red Ink (LRI)

The red ink of the flag glows **orange** under long wave ultraviolet light.

3636c	Plate	S55555	Booklet Pane of 20		☐

Note for 3636 and 3636c

The red ink:

NRRI: Non Reactive Red Ink.

The Red ink stays red under longwave ultraviolet light. (also called: **Dead red**)

The dead Red appears in two reds: dark red and light red.

LRI: Luminescent Red Ink.

The red ink of the flag glows **orange** under long wave ultraviolet light.

The orange glows in three shades: **Bright orange**, **orange** and **Low orange**

The tagging:

The difference between **Solid**, **Grainy** and **Mottled** tagging (see photo page 27) you can detect with a Short wave Ultraviolet Light at the front of the stamp, but using a long wave ultraviolet light at the back of used soaked single stamps you can also recognise the tagging types:

Light up as solid yellowish paper is the **Solid tagged** issue.

Light up as dark grey mottled structure paper without silk fibers is the **Mottled tagged Low orange (LRI)** issue.

Light up as light grey with silk fibers is the **Mottled tagged, Grainy** or the **Solid Dead Red (NRRI)** issue.

Light up as paper with structure but without silk fibers is the **Mottled tagged, Bright orange (LRI)** issue.

Paper varieties:

Using long wave ultraviolet light the fluorescence response:

Dead or Dull paper: is not responding and looks dark grey (no fluorescence);

Low/medium fluorescence Paper: is lighting white, but less then Hi-bright paper;

Hi-bright Paper: is lighting very bright white.

You can also recognize the paper varieties by structure:

Paper without structure;

Paper with structure;

Paper with silk fibers (also called: Granate Paper). (see photo page 27)

Gils-Paper (Golden Illuminated Long-wave UV Specks): paper without structure, but at the front of the stamps there are golden specks in the paper. The specks are visible on the white parts of the stamp with no printing ink. (see photo page 27)

Found on the 3636c, solid tagged, Dead Red single stamps.

Found on a double-sided booklet pane: side with the 12 stamps with specks. The side with the 8 stamps is Granate paper without specks.
